This is a roadmap for me and others to use to focus our attention on a network of possibilities.

Many professionals in other countries ask me: how can I contribute?

There are 10 sections in this site. Most are contained in The Proposal page and linked to the tiles on the **Home** page.

From repair to renewal.

Ukraine is mending homes one at a time, in the same cold blocks one strike can knock out. We propose rebuilding one neighbourhood at a time.

THE GROUND ZERO NEIGHBOURHOOD HEART

One neighbourhood, rebuilt whole.

1 **Shelter** you can live in	2 **Renewed** Soviet-era blocks	3 **New homes** from a kit of parts	4 **Landscape** from the rubble	5 **Its own** energy	6 **History** kept and restored

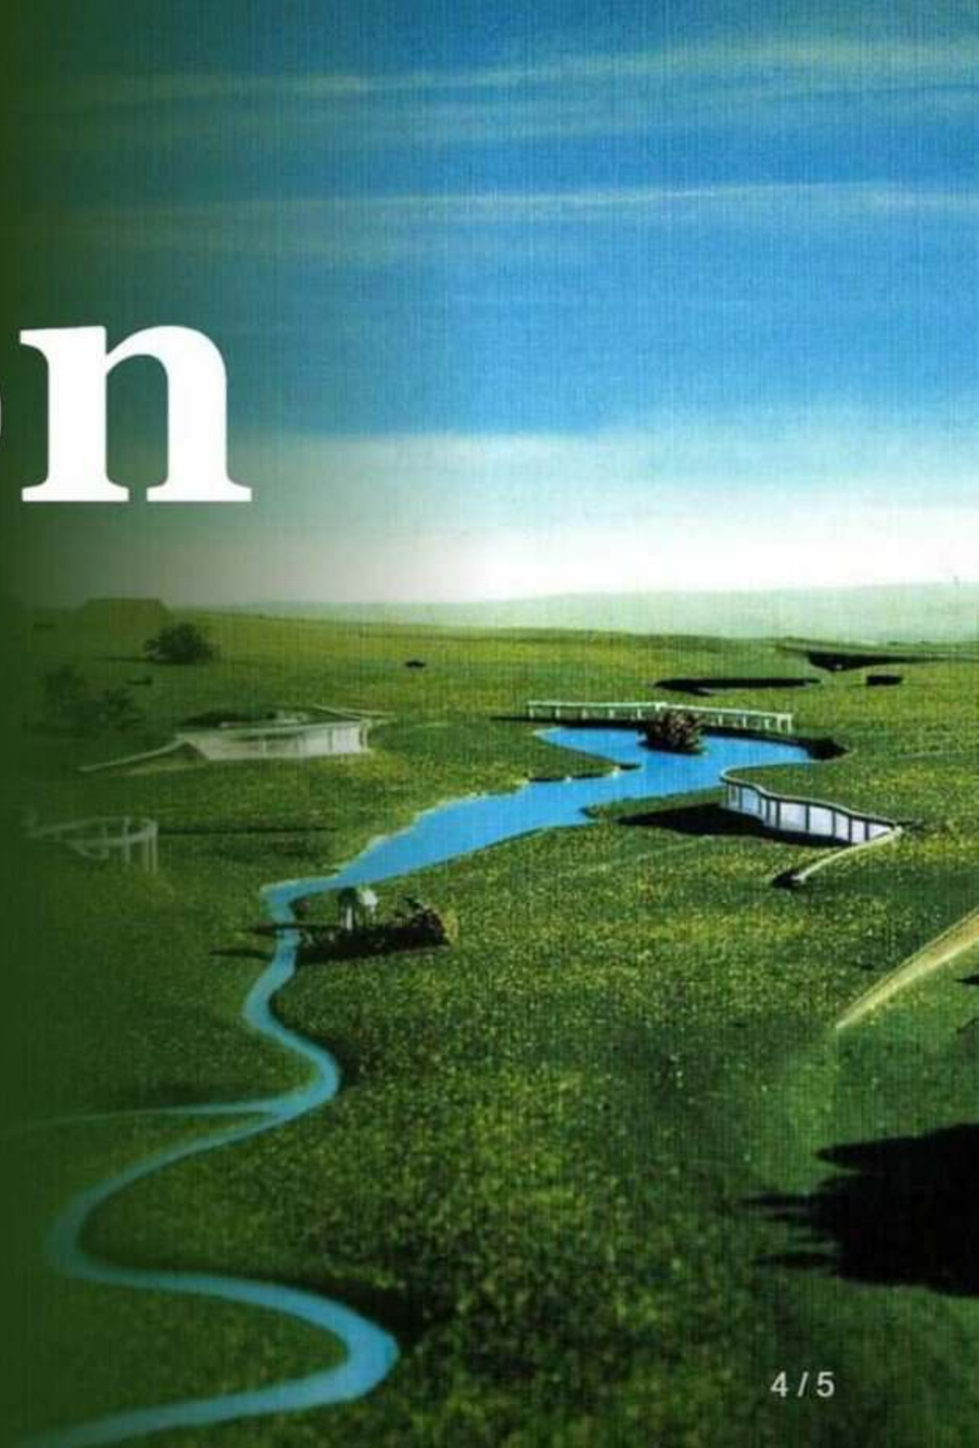

Our passive-design scheme on the Vistula, Warsaw — proven over thirty years

CLOSE TO

€1 billion

announced in 2026 for exactly this: municipal buildings, affordable homes and warm apartment blocks.

The missing piece is a Ukrainian-led design people can see.

Let us start with one place.

1. Choose a hromada
2. Run the Union’s first design competition
3. Build a first prototype of the kit
4. Bid jointly for a £20 million pilot
